

A DevOps Engineer bridges the gap between software development and IT operations. They design, automate, and manage cloud infrastructure and CI/CD pipelines. Their primary goal is to accelerate software delivery, ensure high system availability, and improve overall deployment reliability.

The following structured, scannable job description is an industry-standard template you can use or adapt.

Responsibilities

- **CI/CD Management:** Design, build, and maintain robust Continuous Integration and Continuous Delivery (CI/CD) pipelines to enable seamless code deployment.
- **Infrastructure as Code (IaC):** Provision, configure, and manage cloud infrastructure using tools like Terraform or CloudFormation.
- **Automation & Scripting:** Automate operational processes, system provisioning, and software deployment using languages like Python, Bash, or Go.
- **Containerization & Orchestration:** Package and deploy applications using container technologies such as Docker and Kubernetes.
- **System Monitoring & Troubleshooting:** Implement monitoring, logging, and alerting systems to proactively detect and troubleshoot production issues (e.g., using Prometheus, Grafana, or Datadog).
- **Security & Compliance (DevSecOps):** Integrate security best practices and compliance checks throughout the software development life cycle (SDLC)
- **Cross-Functional Collaboration:** Work closely with software developers, QA, and IT teams to streamline workflows and resolve integration challenges.

Required Skills & Qualifications

- **Cloud Platforms:** Hands-on experience with major cloud providers such as AWS, Microsoft Azure, or Google Cloud Platform (GCP).
- **CI/CD Tools:** Proficiency with tools like Jenkins, GitHub Actions, GitLab CI, or CircleCI.
- **Infrastructure Tools:** Experience with configuration management and IaC tools (e.g., Ansible, Terraform).
- **Containers & Orchestration:** Solid understanding of Docker and Kubernetes ecosystems.
- **Programming/Scripting:** Proficiency in Python, Bash, or Ruby, and a working knowledge of Git version control.

- **Education & Experience:** Bachelor's degree in Computer Science, Information Technology, or a related field, combined with proven experience in a software engineering or DevOps role.
